

Chemical Finish: Black

[MIL-F-495E] (no measurable thickness)

A uniform black corrosion retarding coating for copper & copper alloys. Coating has no abrasion resistance. Used to impart black color to and for gloss reduction purposes on copper alloy surfaces other than food service and water supply items. Also as a base for subsequent coatings such as lacquer, varnish, oil, and wax.

Applications:

Camera components; laser devices; jewelry; brass hardware; specialty tooling
